Assignment Topic: Generation of AI videos with great prompts

AI Video Prompt:

Prompt 1:

A majestic Bengal tiger with vibrant orange fur, black stripes, and piercing yellow eyes strides powerfully through a lush, dense jungle at golden hour. Sunlight filters through tall canopy leaves, casting dappled shadows on the misty forest floor covered in ferns, vines, and fallen logs. The tiger moves gracefully with realistic muscle ripples under its fur, paws padding softly on the earth, tail swaying rhythmically. Camera follows in a smooth tracking shot from side profile, then pulls back for a wide establishing view, with ambient sounds of birds chirping, leaves rustling, and distant monkey calls. Cinematic style, high detail, 4K resolution, 10-second loopable animation, slow-motion emphasis on the tiger's confident prowling.

2. AI Video Prompt:

Prompt 2:

A wide cinematic video shot of a peaceful natural landscape during early morning sunrise. The camera slowly glides forward over lush green meadows covered with soft mist. Tall mountains rise in the background, partially covered by drifting clouds. A crystal-clear river flows gently through the valley, reflecting the warm golden sunlight. Sun rays pass through tall trees, creating a soft glow and natural lens flare. Birds fly gracefully across the sky with smooth motion. Ultra-realistic textures, natural color grading, calm cinematic movement, shallow depth of field, serene atmosphere, photorealistic, 4K quality
